Shycocan strides towards neutralising Coronavirus

EOI CORRESPONDENT

KOLKATA, MAY 19/--/Though the intensity of the pandemic has reduced; a new COVID variant is triggering a wave of uncertainty yet again. Daily new COVID cases are being reported in the country. The anticipated 4th wave is frightening to individuals and businesses alike, as attempts to attain some normalcies are underway. As the daily fresh infections are rising, a niche tech-solution company Shycocan presents a device that assures "Virus Attenuation", which is being globally adopted by organisations today to ensure business continuity amidst uncertainties, sources informed.

Shycocan has been tested on SARS-COV-2 (Covid 19 virus) at CCMB, Hyderabad - A CSIR laboratory and also at TNO, Netherlands (one of the top Research and testing facilities in Europe). According to these test reports, Shycocan has proven to disable the virus up to 96% and 95% respectively. The device has also been tested on other corona viruses like Avian,

Equine Arteritis and also MS2 Bacteriophage, which is an approved surrogate virus for the testing of both Coronavirus and Influenza by WHO. These test reports show efficacy rates of 100% on air-borne viruses and 99.9% on surface-borne viruses, sources said.

Shycocan has reported steady growth in Eastern India. Alok Sharma, Founder of Shycocan and the former MD of Apple India said, "Shycocan Corporation was founded in July 2020. There are over 30,000 units of Shycocan installed globally and the majority of these installations have happened in the last 12-18 months. We have sold a substantial number in the East and North East until now. Our customers include Corporates, Individuals, and Government offices like the Meghalaya Legislative Assembly and Arunachal Pradesh Legislative Assembly. In case a state considers mass adoption of the device, then we would be happy to accommodate an onset of manufacturing in that state for both domestic and global consumption."
